

Phase III Clinical Safety Evaluation of CardioVax in Adult Cohorts

ABSTRACT: Evaluation of adverse event frequency across 1,200 randomized trial participants.

1. Introduction

CardioVax demonstrated 94% efficacy.

Safety reporting identified 12 mild reaction cases.

No fatal incidents recorded during trial.

2. Safety Results

Incidence of urticaria was 0.8%.

All cases resolved with standard therapy.

Conclusion: Favorable benefit-risk profile.
